Unit “ 4 : Session “ 5 : SLO “ 2 | Logic Programming “” Rule Evaluation

■ I. Query Evaluation

- Given: likes(john, X) :- food(X). with facts food(pizza). food(burger).
- Query: ?- likes(john, X).
- Answer: X = pizza ; X = burger.
- Explanation: the rule succeeds for every X that satisfies food(X). Prolog first unifies X with pizza; on asking for more solutions (;) it backtracks and returns burger. Both values satisfy the query.
