

Name: AAVISHKAR SINGH AAVISHKAR SINGH | Reg. No: RA2511003011024

Unit 4 : Session 11 : SLO 2 | Odd Man Out Pipeline Hazards

I. Odd Man Out

1. Group RAW, WAR, WAW, RAR → RAR → two reads never conflict; the other three are true data hazards.
2. Group Data forwarding, Branch prediction, Operand caching, Disk defragmentation → Disk defragmentation → a storage maintenance task, not a hazard technique.
3. Group Structural, Control, Data hazard, Power surge → Power surge → an electrical fault, not a pipeline hazard.
4. Group Bubble, Flush, Stall, Acceleration → Pipeline acceleration → the others are disruption terms.
5. Group ALU, FPU, Cache memory, Branch target buffer → Cache memory → a storage structure; the others are processor execution/prediction hardware units.
6. Group Bypassing, Speculative execution, Out-of-order execution, Sequential processing → Sequential processing → no overlap/parallelism.
7. Group Fetch, Decode, Execute, Compile → Compile → a software step, not a pipeline stage.
8. Group CPI, IPC, MIPS, USB → USB → an I/O interface; the others are performance metrics.
9. Group NOP insertion, Register renaming, Reorder buffer, Motherboard → Motherboard → a physical board; the others are hazard-handling mechanisms.
10. Group RISC pipeline, CISC pipeline, Printer driver → Printer driver → peripheral software.
