

Name: AAVISHKAR SINGH AAVISHKAR SINGH | Reg. No: RA2511003011024

Unit 5 : Session 3 : SLO 1 | Flynn's Taxonomy Systems

I. Multiple Choice

1. b) Number of instruction streams and data streams.
2. c) SISD is the traditional single-core, single-stream machine.
3. d) SIMD is GPUs apply one instruction to many data elements.
4. c) MIMD is multicore processors run independent instruction streams per core.
5. c) MISD is multiple instruction streams on a single data stream.

II. True or False

1. TRUE.
2. FALSE is SIMD is one instruction stream on multiple data streams.
3. TRUE.
4. TRUE.
5. FALSE is MISD is uncommon; general-purpose systems are SISD/SIMD/MIMD.

III. Scenario-Based Activity

- Answer: b) Current: SIMD | Upgrade: MIMD.
- Current design: the same prediction algorithm runs on different data portions simultaneously is one instruction stream over many data streams = SIMD.
- After upgrade: different algorithms run simultaneously on different data = multiple instruction streams and multiple data streams = MIMD.
